## SUMMARY

---

I am a computational and statistical investigator at Brigham and Women's Hospital and Harvard Medical School, with strong interests in biomedical data, particularly brain imaging, genetics, and cardiovascular data. My work can be viewed in two major components.

The first component focuses on building end-to-end pipelines that transform raw, large-scale datasets into reliable resources for clinical discovery. Leveraging these resources, I develop statistical and machine learning methodologies to address challenges such as high dimensionality, spatial correlation, and complex data structures. Reproducibility and accessibility are central to my work: each paper is accompanied by well-documented Python/R/C/C++ software (available at <https://github.com/lanzhouBWH>), enabling others to apply and extend my methods.

The second component centers on providing statistical contributions—including survival analysis, causal inference, and predictive modeling—for studies that utilize diverse biomedical data sources such as electronic health records, clinical trial data, and population-based cohorts. This involves, design of experiments, hands-on analysis, statistical plan drafting, and manuscript/grant preparation.

My work has been published in leading statistical journals (Technometrics, Biometrics, Bayesian Analysis, Journal of the Royal Statistical Society: Series A, Data Science in Science), as well as in top neuroimaging, genetics, bioinformatics, and medical journals (Imaging Neuroscience, NeuroImage: Clinical, Bioinformatics, JAMIA Open, The New England Journal of Medicine). In addition, as a statistical consultant, I have co-authored more than 50 collaborative papers in high-impact biomedical and clinical journals, including the Journal of the American Heart Association, Circulation, and Radiology. Currently, I am expanding my work to incorporate artificial intelligence for biomedical discovery and clinical translation.

## WORK EXPERIENCE

---

<b>Brigham and Women's Hospital, Harvard Medical School</b> <i>Investigator; Instructor in Medicine</i>	Oct 2022 – present
<b>Yale Medical School</b> <i>Statistician Consultant</i>	Jul 2020 – Sep 2022
<b>Pennsylvania State University</b> <i>Bruce Lindsay Visiting Assistant Professor</i>	Aug 2019 – Jul 2020
<b>Eli Lilly &amp; Company</b> <i>Ph.D. Statistics Intern</i>	May 2018 – Aug 2018
<b>Ventana Medical Systems (Roche)</b> <i>Imaging Scientist Intern</i>	May 2016 – Jul 2016

## EDUCATION

---

<b>North Carolina State University</b> , Raleigh, North Carolina Ph.D. in Statistics, July 2019
<b>Georgia Institute of Technology</b> , Atlanta, Georgia M.S., Statistics (Mathematics), May 2015
<b>Zhejiang University</b> , Hangzhou, China B.S., Biology, May 2012

## EXPERTISE

---

<b>Programming</b>	Python, R, C/C++, Bash, Slurm Workload Manager
<b>Statistics &amp; Machine Learning</b>	Bayesian Modeling, Probabilistic Graphical Models, Quantile Regression, Spatial Statistics, Matrix-Variate Methods, High-Dimensional Data Analysis
<b>Computation</b>	High-Performance Computing, Parallel Computing, Algorithm Development
<b>Biomedical Applications</b>	Radiology, Genetics, Neuroimaging, Diffusion MRI, Magnetic Resonance Spectroscopy

### Statistical Methods and Analyses for Diffusion Magnetic Resonance Imaging (MRI)

- **Background:** The structural connections within the brain's white matter are essential for its function. Diffusion MRI tractography allows for the in vivo reconstruction of white matter fiber pathways. Diffusion MRI poses significant challenges due to its high dimensionality, spatial correlation, and complex signal structures.
- **Focus:**
  - I collaborated with colleagues to develop a nonparametric modeling pipeline for diffusion MRI harmonization and led the evaluation of its performance.
  - Using the established imaging processing pipelines (*UKFTractography*: <https://github.com/pnlbwh/ukftractography> and *whitematteranalysis*: <https://github.com/SlicerDMRI/whitematteranalysis>), I led development of statistical and computational methods for analyzing diffusion MRI tractography to address high dimensionality, spatial correlation, and complex signal structures inherent to such data.
- **Data:** Human Connectome Project (HCP), Adolescent Brain Cognitive Development (ABCD) Study, Alzheimer's Disease Neuroimaging Initiative (ADNI).
- **Collaborators:** Lauren J. O'Donnell (Brigham and Women's Hospital, Harvard Medical School)
- **Selected Publications:**

- [1] Zhou Lan, Yuqian Chen, Jarrett Rushmore, Leo Zekelman, Nikos Makris, Yogesh Rath, Alexandra J. Golby, Fan Zhang, and Lauren J. O'Donnell. *Fiber Microstructure Quantile (FMQ) Regression: A Novel Statistical Approach for Analyzing White Matter Bundles from Periphery to Core*. *Imaging Neuroscience*, 3, imag\_a-00569 (2025). doi:10.1162/imag\_a-00569.

O'Donnell, "Towards an Informed Choice of Diffusion MRI Image Contrasts for Cerebellar Segmentation", *Human Brain Mapping* **46**, 11 (2025).(doi: doi.org/10.1002/hbm.70317)

### Statistical Contributions for Medical, Clinical and Epidemiological Studies

- **Background:** Complex biomedical data sources such as electronic health records, clinical trial data, and population-based studies need rigorous statistical approaches to draw reliable inferences and inform medical practice.
  - **Focus:**
    - Authored and reviewed high-quality statistical deliverables, including protocols, statistical analysis plans (SAPs), and reports for cross-functional collaborators and stakeholders for medical, clinical, and epidemiological Studies.
  - **Selected Publications:**
- [1] Shah, Nisarg, Zhou Lan, C. Justin Brown, Seth S. Martin, and Alexander Turchin, "Impact of Statin Nonacceptance on Cardiovascular Outcomes in Patients With Diabetes", *Journal of the American Heart Association* **14**, 11 (2025).(doi: <https://doi.org/10.1161/JAHA.124.040464>)
  - [2] Gregory Piazza, Behnood Bikdeli, Arvind K. Pandey, Darsiya Krishnathasan, Candrika D. Khairani, Antoine Bejjani, Ruth H. Morrison, Heather Hogan, Sina Rashedi, Mariana Pfeferman, Junyang Lou, John Fanikos, Nicole Porio, Lisa Rosenbaum, Piotr Sobieszczyk, Zhou Lan, Marie Gerhard-Herman, Umberto Campia, Samuel Z. Goldhaber, for the HI-PRO Trial Investigators, "Apixaban for Extended Treatment of Provoked Venous Thromboembolism (HI-PRO Trial)", *New England Journal of Medicine*, (2025). (DOI: 10.1056/NEJMoa2509426)

## Statistical Methods and Analyses for Magnetic Resonance Spectroscopy (MRS)

- **Background:** MRS is a tool for exploring the neurometabolic underpinnings of brain function, providing unique insights into the biochemical composition of tissues.
- **Focus:**
  - I mentored a student to develop an automatic MRS data processing pipeline that avoids the manual data quality control.
  - I led the invention of NMetNet, which is a novel network-based statistical approach in analyzing the alteration of metabolites between functional neurological disorders (FND) and controls
- **Data:** Internal Data from Center for Clinical Spectroscopy, Department of Radiology, Harvard Medical School, Brigham and Women’s Hospital
- **Collaborators:** Alexander Lin (Brigham and Women’s Hospital, Harvard Medical School), Kasia Kozłowska (University of Sydney)
- **Selected Publications:**
  - [1] Beroukhi B, McComas S, Joyce JM, Schuhmacher LS, Koerte I, Lan Z, Lin A, “A novel automated pipeline to assess MR spectroscopy quality control: Comparing current standards and manual assessment.”, *J Neuroimaging* **35**, 1 (2025). (DOI: doi.org/10.1080/26941899.2024.2412017)
  - [2] Zhou Lan, Sheryl Foster, Molly Charney, Max van Grinsven, Katherine Breedlove, Kasia Kozłowska, Alexander Lin, “Neurometabolic Network (NMetNet) for Functional Neurological Disorder in Children and Adolescents”, *NeuroImage: Clinical* **46**, (2025).(doi.org/10.1016/j.nicl.2025.103767)

## Statistical Methods and Analyses for Genetic Network Data

- **Background:** Network marker selection on genome-scale networks plays an important role in the understanding of biological mechanisms and disease pathologies. A unified approach for network-based feature selection on general large-scale networks and creating an easy-to-use software package is in demand.
- **Focus:**
  - I led the development of an R package, the Bayesian network feature finder (BANFF), providing a package of posterior inference, model comparison, and graphical illustration of model fitting.
  - The model was extended to a more general form, and a parallel computing algorithm for the Markov chain Monte Carlo-based posterior inference and an expectation maximization-based algorithm for posterior approximation were added.
- **Data:** Spellman yeast cell cycle microarray data
- **Collaborators:** Jian Kang (University of Michigan), Tianwei Yu (The Chinese University of Hong Kong)
- **Selected Publications:**
  - [1] Zhou Lan, Yize Zhao, Jian Kang, Tianwei Yu, “Bayesian network feature finder (BANFF): an R package for gene network feature selection”, *Bioinformatics* **32**, 23 (2016). (DOI: 10.1093/bioinformatics/btw522)
